

ELECTRONIC DENTAL SERVICES

TriZetto Provider Solutions (TPS) streamlines the dental claims process through an automated, electronic solution that helps organizations save time, improve efficiencies and increase revenue.

Spending for dental services increased to \$129.1 billion yet many dental practices continued to use inefficient manual processes to submit dental claims.

TPS offers an easy-to-use solution that reduces delayed payments by improving the claims submission system. We help manage claims and attachments and have the ability to reach hundreds of dental payers all through one solution. In addition, TPS integrates with practice management systems.

Electronic Dental Services help dental offices by:

- Confirming patient eligibility
- Submitting Pre-Treatment Estimates to payers for approval
- Submitting claims to payers, electronically or on paper
- Correcting claims online or through your practice management software
- Submitting attachments electronically, including images and explanation of benefits (limited availability)
- Requesting electronic remittance advice
- Sending Patient Statements with online bill-pay options available
